

Giving patients access to your doctors when they need them most

Finding a doctor through your facility's website can be simple, intuitive and quick with this Customer Relationship Management (CRM) module delivered by our Healthcare Unified Technology (HUT) framework. Once they've found a provider, patients and consumers can book an appointment (with select providers). They can view notes for upcoming office visits, receive confirmation emails and view their previous appointment history.

MyHealthOne

Features

All patients need to do is search for any available provider using a variety of search criteria. They can easily narrow or expand their search by changing search terms. Some examples would include:

LOCATION

SPECIALTY

NAME

FACILITY

AND MORE!

CRM modules deliver a consistent user experience between our patient portal and HUT. Find a Doctor/Make an Appointment:
